1. The examiner acknowledges and accepts applicant's timely filed and properly executed Terminal Disclaimers of July 23, 2007.
2. The following is an examiner's statement of reasons for allowance: The invention relates to a microchannel reactor and method of making a microchannel reactor wherein the microchannel reactor comprises a plurality of microchannels having a connection between at least two microchannels wherein the connection has a metal internal surface that has been coated with a vapor-deposited buffer layer comprising a metal oxide wherein the buffer layer has a thickness of between 0.05 microns and 10 microns representing the catalyst disposed within the microchannel reactor. The catalyst has three layers a porous support, buffer layer, interfacial area and catalytically active area. The buffer layer thickness is nonporous and exhibits thermal and chemical stability at elevated temperature and stabilizes the catalyst layer and prevents side reactions from taking place. The thickness of the buffer layer is nonobvious and the art does not teach or suggest how one of ordinary skill would provide a thickness, which exhibit the characteristics and properties of the microchannel reactor. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
